

Valdemar Vålvik Individual reflection

- What do I want to learn or understand better?

A: (Last week's reflection about web servers is probably not relevant anymore.) I currently have minimal experience with the agile working process and Scrum.

B: I want to have a better understanding for how to follow and work with the agile process and become better with the Scrum boards i.e., writing quality user stories and making reasonable "slices".

C: The parts listed in B will be worked on in every sprint and is something I expect becoming better at towards the end of the course.

- How can I help someone else, or the entire team, to learn something new?

A: My perception is that the team members from the I-program have not used version controls (Github) in any larger extent.

B: Since Git is a central part of a collaborate programming project, all members need to be familiar with the functionalities, like committing and merging

C: When the project enters the coding phase, I together with the other IT-program members will be able to help and show how to do the things listed above.

- What is my contribution towards the team's use of Scrum?

A: At this point I would say that I do not possess any more knowledge than the other members about how to make use of Scrum in a good practice.

B: The goal is to be sufficient and able to both individually and together with the group make reasonable decisions about the different parts in Scrum.

C: Through participation at the course planned lectures/exercises and possibly some googling I can hopefully become better at Scrum and hence increase the groups overall understanding of Scrum.

- what is my contribution towards the team's deliveries?

A: At this point we have had a couple of meetings and planning towards what to do.

B: Participation in discussions and suggest ideas will be important now in the initial face. Later, communication and taking responsibility for the delegated work.

C: This will be achieved through active participation and as said before, responsibility and communication.
