

Individual reflection week 4

What do i want to learn or understand better?

What is: Next sprint we should start the coding of our android application and during this development we will be working with the architectural pattern MVVM.

Though I have worked on an android application before, during that project we did not really apply MVVM as one should so I feel like my knowledge of the pattern and how it works in practice is limited.

What might or should be: I hope to feel that I have a good grasp of what MVVM actually entails in the structure of an android project and how one works with it effectively.

A plan for getting from where you are to where you want to be: I have done some reading on the pattern but in order to really get a good understanding I feel that I have to apply it in practice so during this project I think that I will learn to understand MVVM and what makes it preferable in android development.

How can I help someone else, or the entire team, to learn something new?

What is: This week much of our work revolved around creating a first iteration of the class diagram of our application as well as planning of the database.

Both of these subject is something that everyone in our group has pretty similar knowledge of so I did not feel the need to teach someone something new. I did however

lend my knowledge on some points when someone maybe felt that they did not quite understand fully.

What might or should be: Next sprint we should start the actual coding of the android project, something that I have done before. I hope to be able to help my team mates learn things of the process that they have not done before.

A plan for getting from where you are to where you want to be: When someone expresses that they don't know something that I do know I should lend my knowledge to that person.

What is my contribution towards the team's use of Scrum?

What is: This week I participated in all the Scrum-specific meetings, the planning, the review and the retrospective. In all these meeting I participated in discussions as well as wrote some parts of the meetings down. I created several user stories, and helped in the formulation of others.

What might or should be: I hope to continue contributing in the same way that I am at the moment

A plan for getting from where you are to where you want to be: I should achieve this by continuing to be active during the different meetings and processes by sharing my opinion and continue to participate in the writing down of things we conclude.

What is my contribution towards the team's deliveries?

What is: Our main deliveries this sprint was to finish a first iteration of the class diagram of our project as well as write the weekly team reflection. During the creating of the diagram I was active both by sharing my opinion of the design as well as, for some parts, being the one up at the blackboard actually drawing the design out. For the team reflection I voiced my opinions on the topics as well as wrote some parts of the document.

What might or should be: I hope to continue in the same way as I feel that I am contributing well towards the deliveries.

A plan for getting from where you are to where you want to be: I should continue to take on user stories and finish them in accordance to their tasks and acceptance criteria. I should also continue to participate enthusiastically in the reflection meetings

as well as continue to write some things down.
