

- What do I want to learn or understand better?

As said from the last two week, our app is now more dependent on livedata than before. Even though I have a better understanding there are still situations that I do not understand regarding livedata and the connection with the database. This was the last sprint so there will not be any more opportunity in regards to this course, to learn more about this.

- How can I help someone else, or the entire team, to learn something new?

Some team members struggled with the usage of an adapter. This is something I regard myself understanding a bit and could have helped with in the coming sprints. As said before, this was the last sprint so this opportunity may come in the future in some other course.

- What is my contribution towards the team's use of Scrum?

Keep writing more good user stories and actively participating in discussions. Also trying to complete user stories I see that no other team member has managed to finish towards the end of the sprints.

- What is my contribution towards the team's deliveries?

This week I made the like-buttons for the individual elements in a list and the information tab work with the database. I also made an "edit review" button for the "info review-tab". This button is not properly connected with the database but is halfway complete. This is because there was a lack of time. I was also sick for the most part of the sprint, so the amount of work planned for me was put on ice in the event of me not being able to get work done.
