Individual reflection week 6. Felix Edholm

What do I want to learn or understand better?

What is: This week my teammate found a good tutorial for android architecture components including for Room database. I watched these videos and feel that they gave me good theoretical knowledge of different parts, specifically related to Room.

What might or should be: I want to be good at creating a Room database and understanding the different features of the library, the pros and cons.

A plan for getting from where you are to where you want to be: Even though the tutorial was good, I feel that in order to better understand, like always, the real learning will come when the actual implementation of Room in our project happens which I hope to play a part in.

How can I help someone else, or the entire team, to learn something new?

What is: I can't think of a specific moment this sprint where I helped the team or a team member learn something new.

What might or should be: I should help my team when I can, however, if no opportunity presents itself where my knowledge is needed, I can't force it to happen.

A plan for getting from where you are to where you want to be: Continue helping when opportunity arises.

What is my contribution towards the team's use of Scrum?

What is: This week, like last week, I participated in all the Scrum-specific meetings, the planning, the review, the mid week meeting and the retrospective. In all these meetings I participated in discussions as well as wrote some parts of the meetings down. This week I wrote a bit more in the documents than I did last week. I also created and helped in the creation of some user stories for the backlog.

What might or should be: I hope to continue contributing in the same way that I am at the moment.

A plan for getting from where you are to where you want to be: I should achieve this by continuing to be active during the different meetings and processes by sharing my opinion and continue to participate in the writing down of things we conclude. As well as continue creating user stories when needed.

What is my contribution towards the team's deliveries?

What is: Our main deliveries this sprint was to finish our user stories as well as write the team reflection. I finished my user stories with some time over in the week, however, I could fill the surplus time with learning about android architecture components and the Room library.
For the team reflection I voiced my opinions on the topics as well as wrote parts of the document.

What might or should be and how to get there: If I dont have the opportunity to fill the time with learning about Room etc. I should ask my team if anyone needs help in finishing their user stories.
