- What do I want to learn or understand better?

As said from last week, our app is now more dependent on livedata than before. There are still some issues with the observers to some of the livedata variables. Next week's sprint will most likely demand some handling of this and hopefully help me improve my skills.

- How can I help someone else, or the entire team, to learn something new?

Passing on information through livedata is something I managed to do, while some other team members struggle with this. Next week I can hopefully show and answer questions regarding this since it is central to our apps functionality.

- What is my contribution towards the team's use of Scrum?

Keep writing more good user stories and actively participating in discussions.

- What is my contribution towards the team's deliveries?

This week I made it possible to save a review and make it available in the history-tab. I also made a detailed view for an already made review. There is currently some issue with the information handling because the observer doesn't get triggered and therefore the detailed view of a review receives default values. This will be addressed in the next sprint and hopefully solved with minimal effort. I also bypassed one of the activities, so the app now only uses the MainActivity.
